

Summer Term Week 1 Activities

Our topic this term is Allotment. This will involve us learning about living things such as plants and what they need to survive.

1. Grow and care for a plant with an adult. You can start from a seed or an already established one. Write instructions to tell someone how to make your plant grow. Make sure you include what things they need to survive and any measurements.
2. Investigate what an allotment is and where you might find one in your local area. Find out what things you could grow in one. Then create an information leaflet in your exercise book.
3. Design your own allotment in your exercise book. Draw and label a plan of the plants you would like to grow. (Think about the environment and your favourite fruits and vegetables!)
4. Make a model allotment using any materials you can find-get creative!
5. Make a Mr Potato head by cutting the top off a potato, putting cotton wool on top and then growing some cress on it. Make sure you water it every day. Record the changes in a table in your exercise book.
6. When growing plants people often use compost to help the plants to grow. Use the link to find out what compost is and how to make it.
<http://www.ecofriendlykids.co.uk/composting.html>
7. People often use biodegradable waste in compost. Look at the information on the link below to find out what biodegradable and non biodegradable waste is. Write an explanation in your own words. This can be set out any way you would like in your exercise book. <https://mocomi.com/biodegradable-and-non-biodegradable/>
